

Esha Kar

FULL STACK ENGINEER · REACT · NODE.JS · REDIS · TYPESCRIPT

Kolkata, India esha.kar20@gmail.com +91-9932275231 [LinkedIn](#) [GitHub](#) [Portfolio](#) [YouTube](#)

Full Stack Engineer with 2+ years shipping production systems across fintech, AI tooling, and consumer platforms. Implemented caching infrastructure that cut server load by 30%, integrated 10+ REST APIs into live products, and resolved 100+ bugs across codebases used by real users daily. I own challenges end-to-end — from database schema to UI state — and ship work that holds up at scale.

TECHNICAL SKILLS

LANGUAGES

JavaScript (ES6+), TypeScript, Python

BACKEND & APIS

Node.js, Express.js, Nest.js, REST API design, JWT Auth, Rate Limiting

PRACTICES

Component-based architecture, Code reviews, Sprint-based delivery, Production debugging

FRONTEND

React.js, Next.js, Tailwind CSS, Material UI, Redux Toolkit

DATA & PERFORMANCE

MongoDB, Redis (caching, sessions), TanStack Query, Query Optimization

TOOLS

Git, GitHub, Postman, Netlify, Figma

WORK EXPERIENCE

Full Stack Developer — *Ascentspark Software Pvt. Ltd.*

Dec 2025 - Present

- Designed and shipped **Next.js API routes** supporting real-time data operations across 200+ concurrent sessions, reducing backend latency by 30%.
- Replaced direct API calls with **TanStack Query** across core user flows, eliminating redundant network requests and cutting average load time by 35%.
- Refactored business logic into **reusable service modules**, reducing code duplication by 40% and enabling faster feature iteration across the team.
- Identified and resolved **15+ UI bottlenecks** in production, improving interaction response times during checkout and onboarding flows.

Software Development Intern — *ITJOBXS*

Jan 2025 - Oct 2025

- Diagnosed and fixed **20+ bugs** across API endpoints, reducing average server response time by 25%.
- Architected **Redis-based rate limiting and session caching** layer from scratch, cutting unauthenticated request abuse by 40% and improving stability under peak load.
- Optimized **5+ high-traffic MongoDB queries** using indexing and aggregation pipelines, shaving 120ms off average query execution time.

Frontend Developer — *People Maketh*

May 2024 - Dec 2024

- Integrated **10+ REST APIs** into React-based internal dashboards, replacing manual data entry and cutting operational verification time by 25%.
- Delivered a reusable **component library** for the data verification system, reducing UI rebuild time for new features by 35% across the engineering team.

PROJECTS

AI-Powered Resume Analyzer & Interview Prep

Live

- Launched a full-stack AI application using **Gemini API** that analyzes resume content and generates role-specific interview questions, reducing interview prep time by 60%.
- Implemented **real-time skill-gap scoring engine** returning ranked match results in under 3 seconds; backend handles 300+ requests at sub-500ms response time.
- Architected backend with **Node.js, Express.js, and MongoDB**, handling 300+ resume analysis requests with sub-500ms average response time.

MERN Notes App

Live

- Shipped production-grade Notes App handling **500+ daily requests** with full CRUD, JWT auth, and **Redis caching** that reduced server load by 30%.
- Optimized MongoDB read queries with compound indexing, improving average response time by 20% under concurrent load.
- Hunted and resolved **50+ bugs** across auth, data persistence, and API layers — zero critical issues in production post-launch.

Dogs Studio

Live

- Crafted an immersive **3D interactive experience** using Three.js and GSAP within React.js, delivering smooth scene transitions and physics-driven animations.
- Choreographed **scroll-linked animation sequences** with GSAP ScrollTrigger, syncing 3D model states to user scroll position for a cinematic browsing experience.

AI Spoken English Platform — Tutopia

Live

- Developed a production **AI-driven spoken English platform** in Next.js + TypeScript integrating ChatGPT API for real-time conversation feedback and pronunciation coaching.
- Managed **JWT-based auth flows** and client-side session persistence via Local Storage, supporting uninterrupted learning sessions across page reloads.
- Owned end-to-end delivery from **Figma design handoff** to deployment, using TanStack Query to eliminate over-fetching across dynamic lesson modules.

Drag & Drop Page Builder

Live

- Architected a **CMS-style page builder** using react-dnd with real-time component editing, undo/redo history (Redux Toolkit), and 12 draggable component types.
- Shipped a **configurable property editor** enabling live customization without page reload — reducing UI configuration time by 50% compared to static form-based editors.

ACHIEVEMENTS & CERTIFICATIONS

- Contributed to **100+ open-source projects** on GitHub — consistent track record of reading unfamiliar codebases and shipping meaningful fixes.
- Earned **5-star HackerRank rating** in algorithm and data structure assessments — top percentile across all participants.

EDUCATION

BCA (Pursuing Second Degree) · 8.76 CGPA

Amity University

2024 - 2027

BA English · 7.5 CGPA

University of Kalyani

2020 - 2023
